Reiz Tech,

Dear Hiring Manager,

I am excited to apply for the Frontend Developer role at Reiz Tech. As a passionate and detail-oriented developer with hands-on experience in React.js, Next.js, TypeScript, and modern UI frameworks, I'm eager to contribute to building responsive, high-performance web applications that deliver exceptional user experiences.

At Zimcrest Technologies, I worked with a frontend team to develop an AI-powered job search platform using Next.js 15, TanStack Query, Zustand, Radix UI, Extracta.io, and Axios. I contributed to building interactive features such as CV data extraction, ATS-optimized CV analysis, and an AI chatbot—delivering a seamless and intelligent user interface.

During my internship at U-GO Services & E-Transport, I built multiple production-ready web applications, including a van rental platform, a pizza delivery service, and an e-commerce site. These projects were developed with React, Firebase, Redux, and Tailwind CSS, with a strong focus on user experience, performance, and API integration.

I bring a strong eye for UI/UX and pay keen attention to design details, ensuring that interfaces are not only functional but also visually consistent and intuitive. I'm excited to apply this mindset alongside my skills in performance optimization and user-centered development at Reiz Tech.

I would welcome the opportunity to discuss how I can support your team and contribute to your product goals. I look forward to hearing from you.
